

REMARKS

Claims 1-10, 12-21, 23-29, 32-34 and 37 are pending in the application.

Independent claims 1 and 32 are amended above to further distinguish Applicant's invention from the prior art.

New claim 37 is added to the application.

No new matter is added to the application by this claim amendment.

The examiner rejected claims 1-10, 12-14 and 23-29 as obvious over Biel in view of Heeger et al. The examiner further rejected claims 15-21 and 32-34 for being obvious over Biel and Heeger et al. as applied to the claims in Section I above and in further view of Bazan (USPA 2005/0035346) and Lai (USP 6,210,401).

The examiner's obviousness rejections are overcome by amending independent claims 1 and 32 above to direct them to a medical sensor and an organic light emitting diode arrangement respectively where the LED is formed by deposition of two or more successive layers. These claim amendments are believed to distinguish the presently pending claims from the cited prior art.

Conclusion

All pending application claims are believed to be patentable at least for the reasons recited above. Favorable reconsideration and allowance of all pending claims is, therefore, courteously solicited.
